The purpose of this three-day workshop is to introduce bloodstain pattern analysis, as well as the enhancement and detection of blood on crime scenes. Documenting these types of scenes and collection of biological evidence will also be discussed. Lectures and hands-on practicums will be provided to all those attending in order to achieve these objectives. Attendees should bring all their employer issued camera equipment and tripods. Attendees should wear comfortable and appropriate clothing. Basic camera knowledge is a plus.
